

To change the 'Help' and 'Network Help' links in the SHRINE webclient:

1. On your SHRINE server, navigate to `/opt/shrine/tomcat/webapps/shrine-api/shrine-webclient/index.html`. You will need to scroll down to the `clientHelp` and `networkHelp` onclick sections:

```
//anonymous click handler to open client help in new window.
clientHelp.onclick = function () {
    window.open(
        'help/pdf/shrine-client-guide.pdf',
        '_blank'
    );
};

//anonymous click handler to open network help in new window.
networkHelp.onclick = function () {
    window.open(
        'help/pdf/shrine-client-guide.pdf',
        '_blank'
    );
}
```

2. Edit the links that you see here (double quotes for websites) to the links of your choice.
3. Save your changes and restart Tomcat services
4. Note: you might need to clear out your web browser cache for the changes to take effect.
